

EE85 Series

CO₂ Transmitter and Switches for Duct Mounting

Duct mounted CO₂ transmitters and switches of the EE85 series are designed for HVAC applications. The CO₂ sensing element uses the Non-Dispersive Infrared Technology (NDIR). A patented auto-calibration procedure compensates for drift caused by the aging of the sensing element and guarantees outstanding long term stability.

Installed into a duct a small flow of air will be established by convection through the probe into the transmitter housing and back into the duct. Inside the transmitter housing the air will diffuse through a membrane into the CO₂ sensing element.

The operation in closed loop air stream avoids pollution of the CO₂ sensor.

Measuring ranges of 0...2000ppm and 0...5000ppm correspond to an analogue interface of 0 - 5/10V or 4 - 20mA. Selectively a switching output with adjustable switching point and hysteresis is available. The instruments can be easily positioned in the duct with the standard mounting flange.
